SUPPLEMENTARY METHODS AND REUSE KIT

From AI Strategy to University Rules in the GCC | ICAMAC 2026 Paper 90 | Evidence cutoff: 23 July 2026

Start here: what the method can and cannot answer

The Four-Layer Public-Evidence Audit (4L-PEA) is a documentary tracing protocol. It helps a reader decide whether an official, publicly inspectable AI-policy instrument meets one of four specified evidence gates. It is not a ranking of governments or universities, a legal opinion, a compliance test, or an assessment of how a rule is enforced.

Layer	Question to ask	Positive evidence required
L1	Is national AI direction public?	Official adopted/authoritative national AI direction
L2	Is there cross-sector operational AI guidance?	Inspectable national/cross-sector control or guideline
L3	Are HE-specific AI-use controls public?	HE-applicable sector instrument with substantive controls
L4	Can at least one university user locate an operative AI rule?	Applicable university or college AI rule (existence, not prevalence)

Four steps to reproduce the reasoning

1. FREEZE — Choose the jurisdiction, official institutions, bilingual search scope, classification gate and historical cutoff before examining results.

2. LOCATE — Recover the actual official document; record title, issuer, version, date, exact URL and the clause/page that supports the proposed code.

3. DECIDE — Assign E, P or U independently for every L1-L4 claim. Put any direct cross-document citation or field implementation evidence into a separate column.

4. RELEASE — Publish the source-level reasoning, negatives/uncertainty, alternative admissible interpretations and a script for count verification.

For readers of this paper: the six-state profile and 57 institution classifications describe a fixed historical evidence window. Code replays the recorded labels; it does not rediscover all websites or validate the original labels.

How to make an E/P/U coding decision

Code	Use only when...	Common error to avoid
E	A dated, inspectable official instrument has adequate authority, scope and substantive content for the layer.	Promoting an official announcement or one-course rule to sector-wide control.
P	An official AI-relevant lead exists but fails at least one named layer gate: draft, scope, authority or substantive control.	Treating all AI activity, guidance or evaluation metrics as operative rules.
U	A qualifying public instrument was not located after a documented Arabic/English official-source search.	Interpreting a failed search as proof of no internal policy or non-compliance.

Worked example: United Arab Emirates

Under the paper’s declared primary HE-use-control gate, the UAE has E / E / P / E. The fact that both national and institutional instruments are visible does not demonstrate that one caused the other.

Layer	Official evidence category	Code and reason
L1	UAE national AI strategy	E — authoritative national direction
L2	UAE AI charter	E — cross-sector governance guidance
L3	HE Outcome-Based Evaluation Framework (OBEF) v11.5	P — evaluates AI integration/readiness rather than prescribing operative HE use controls under the primary criterion
L4	United Arab Emirates University student GenAI policy	E — applicable, inspectable university rule

Sensitivity: a declared broader gate that counts sector evaluation instruments changes the UAE L3 code to E. A researcher must show that choice separately; the original primary code remains P. This does not show that a ministry instrument was transmitted to the university.

What is and is not a “policy chain”

A layer classification describes availability. A policy link requires a specific named citation, delegation or scope clause connecting two instruments. Implementation needs observations, audits, interviews or enforcement records. The study measures availability only; neither links nor actual implementation were systematically coded.

Source search, bilingual verification and audit trail

Prospective search strings that another auditor can reuse

Replace {official-domain} with an authorized ministry, regulator or university domain. These are replay templates, not a claim that every historical query used in July 2026 was preserved verbatim.

Search target	Example query family / official surface
AI rule	site:{official-domain} ("generative AI" OR "artificial intelligence") (policy OR guidelines OR regulation)
Assessment integrity	site:{university-domain} (AI OR ChatGPT) (assessment OR syllabus OR "academic integrity")
Arabic policy	site:{official-domain} + Arabic equivalents of AI, policy, regulation and guidelines (see the editable workbook for exact Arabic terms)
Archive locations	Official policy library; academic affairs; student handbook; teaching-and-learning centre; regulator indexes

Minimum fields per candidate source

Record: source ID, jurisdiction, layer, exact title, issuer, status/authority, issue and effective dates, retrieval date, controlling language, direct PDF or document URL, clause and page, proposed E/P/U, reason a gate passed/failed, known alternative edition, archival hash only if a genuine retained snapshot exists, and coder/adjudication status. A search-homepage locator cannot substitute for a qualifying policy document.

Handling Arabic and English

Compare the underlying issuer, version/approval date, scope and controlling-language clause, not just translated wording. Record the exact contested passage for each language. If a decisive disparity cannot be adjudicated from the authoritative text, mark the state as provisional; do not fabricate agreement.

When U is admissible

Record checks of official policy/regulation libraries, handbook/student conduct, assessment/integrity pages, Arabic and English domain-specific queries, and the search closing date. Distinguish a 2026 document that existed before the cutoff from a later revision introduced after the cutoff; later materials belong to another dated study window.

Research register: Open the 36-record official-source CSV (PROVISIONAL). It includes public locators and reasons but the independent verbatim passage-and-hash audit is incomplete.

Reuse checklist and independent validation plan

Eight documentary fields that make a university AI rule inspectable

Field	What a user should find
Authority and version	Who approved the applicable text, and when did it take effect?
Scope and roles	Which users, programmes, assignments and activities fall under it?
Assessment permissions	What AI use is permitted, conditional or forbidden?
Disclosure	How must users acknowledge AI involvement?
Tools and data	What tools, privacy categories or data transfers are restricted?
Human verification	Who verifies outputs and remains accountable?
Fairness and appeals	Where are bias, accessibility and challenge provisions?
Maintenance and review	Who updates the rule and how is the newest text identified?

Status: these fields are a practical documentation proposal, not an empirical eight-factor model, a weighted ranking, a compliance certificate or a validated policy-quality score. The editable workbook includes a blank locator and status for each field.

Independent double-coding: an unexecuted verification protocol

Freeze and time-stamp the source set. Give two independent human coders the same gatebook and blinded order. Each coder records the E/P/U state, source/page, authority, scope and language decision. Report a 3-by-3 confusion matrix, paired raw agreement, Cohen’s kappa (where defined), all disagreements, and the adjudicated outcome. Recalculate the public matrix only after documenting any changed label. This did not occur in the reported results.

Materials and boundaries

Research package (author-linked GitHub) includes the 57-case key, current manuscript, source metadata, result checks and code. Open the 57-row institution CSV. The complete original pre-outcome eligibility universe and full 36-source archival/coder validation are not supplied. No archival DOI or formal author-approved license is asserted.

Next pages: the original 57-institution appendix with clickable official evidence/search locators. Context/search URLs attached to U cases are explicitly not positive policy evidence.

57 institutions — readable source locator key

Paper 90 • Locked labels and retained official links • Part 1 of 4 • Evidence cutoff: 23 July 2026

E = qualifying explicit evidence; P = relevant but subthreshold evidence; U = qualifying evidence not located under the historical search. U does not mean that no internal policy exists. These links are inherited evidence/search locators, not a freshly verified live-web audit. Full institution names below expand the submitted abbreviated labels; category, order and URL are unchanged.

No.	State	Jur.	Institution (full display name)	Retained locator
1	E	AE	United Arab Emirates University	Open official locator
2	E	AE	University of Sharjah	Open official locator
3	E	AE	Zayed University	Open official locator
4	U	AE	University of Khorfakkan	Open official locator
5	U	AE	Emirates Institute for Banking and Financial Studies (EIBFS)	Open official locator
6	E	AE	Ajman University	Open official locator
7	P	AE	University of Wollongong in Dubai	Open official locator
8	P	AE	American University in Dubai	Open official locator
9	U	AE	Fatima College of Health Sciences	Open official locator
10	U	AE	Emirates College for Advanced Education	Open official locator
11	U	AE	Abu Dhabi Polytechnic	Open official locator
12	P	AE	Al Qasimia University	Open official locator
13	E	AE	Rabdan Academy	Open official locator
14	E	SA	King Saud University	Open official locator
15	E	SA	King Abdulaziz University	Open official locator

57 institutions — readable source locator key

Paper 90 • Locked labels and retained official links • Part 2 of 4 • Evidence cutoff: 23 July 2026

The state is an evidential classification, not a policy-quality rank. Open the source link to inspect the authority, edition and scope; a U-case link may point to a search/context page and cannot establish a positive rule.

No.	State	Jur.	Institution (full display name)	Retained locator
16	U	SA	Imam Mohammad Ibn Saud Islamic University	Open official locator
17	P	SA	King Faisal University	Open official locator
18	U	SA	Dar Al-Hekma University	Open official locator
19	U	SA	Effat University	Open official locator
20	E	SA	Prince Sultan University	Open official locator
21	P	SA	University of Business and Technology	Open official locator
22	P	SA	Islamic University of Madinah	Open official locator
23	P	SA	King Fahd University of Petroleum and Minerals	Open official locator
24	U	SA	King Saud bin Abdulaziz University for Health Sciences	Open official locator
25	E	QA	Qatar University	Open official locator
26	U	QA	Community College of Qatar	Open official locator
27	E	QA	Virginia Commonwealth University School of the Arts in Qatar	Open official locator
28	U	QA	Al Rayyan International University College	Open official locator
29	P	QA	Weill Cornell Medicine-Qatar	Open official locator

57 institutions — readable source locator key

Paper 90 • Locked labels and retained official links • Part 3 of 4 • Evidence cutoff: 23 July 2026

The state is an evidential classification, not a policy-quality rank. Open the source link to inspect the authority, edition and scope; a U-case link may point to a search/context page and cannot establish a positive rule.

No.	State	Jur.	Institution (full display name)	Retained locator
30	P	QA	Texas A&M University at Qatar	Open official locator
